
Global eProcure is ISO Certified

Clark, New Jersey headquarters receives ISO 9001:2000 certification for software design and development and consulting services.

CLARK, NJ, March 5, 2009

Leading procurement services firm, [Global eProcure](#) announced today that its Clark, New Jersey headquarters has been awarded ISO 9001:2000 certification for software design and development and consulting services. The ISO designation is internationally known and regarded as the gold standard in assessing quality management systems. Certification establishes that Global eProcure's processes in software design and development and consulting are systematic and quantifiable resulting in the consistent level of quality in the delivery of services.

"Global eProcure has worked diligently over the past year to document our processes and formalize many of our existing quality policies," said Global eProcure's President, Roopa Gandhi. "Our team is known for their dedication to customer satisfaction, so achieving ISO certification was a natural step for the company. Because ongoing improvements to our products and services is a critical factor in keeping our customers satisfied, we felt that attaining ISO certification was a way to demonstrate to our clients how seriously we take quality."

External auditing firm, [SGS](#), conducted audits of Global eProcure's headquarters. Auditors from the Rutherford, New Jersey-based firm confirmed that the company had met the necessary requirements for ISO certification and ongoing improvement in the quality management system. These standards are determined by the [International Organization for Standardization](#) (ISO), a Geneva-based worldwide network of national standards institutes. The standards outline organizational requirements for the documentation of the procedures in an effective quality management system.

About the International Organization for Standardization (ISO)

ISO (International Organization for Standardization) is the world's largest developer and publisher of International Standards.

ISO is a network of the national standards institutes of 159 countries, one member per country, with a Central Secretariat in Geneva, Switzerland, that coordinates the system.

ISO is a non-governmental organization that forms a bridge between the public and private sectors. On the one hand, many of its member institutes are part of the governmental structure of their countries, or are mandated by their government. On the other hand, other members have their roots uniquely in the private sector, having been set up by national partnerships of industry associations.

Therefore, ISO enables a consensus to be reached on solutions that meet both the requirements of business and the broader needs of society.
